CAPACITY REDUCTION CALCULATION

While the forklift scale will fit most typical forklifts, there are considerations that must be taken into account prior to installation. Due to the extra weight of the CLS, the net lifting capacity of the forklift is reduced by approximately 10 percent. Use the formula below to calculate the amount to down-rate the lifting capacity and determine the net capacity of the forklift.

$$\text{Net Capacity} = \frac{A(B + C) - D(E + F)}{E + G + H}$$

Where:

- | | | | |
|-----|---|-----|---|
| A = | Truck capacity in pounds | B = | Inches from front wheel center line to fork face |
| C = | Inches from fork face to truck rating point (usually 24 in) | D = | Weight of scale in pounds (483 lb) |
| E = | Inches from front wheel center line to carriage face | F = | Inches from carriage face to scale Horizontal Center of Gravity (HCG) |
| G = | J + K (inches from carriage face to rear face of load) | H = | Inches from fork face to new truck rating point |
| J = | Thickness of fork | K = | Thickness of scale |

CLS CLASSES AND ID PLATES

During the initial sale or installation of the CLS, remind your customer that they must have an updated ID plate on their forklift stating the new lifting capacity and center of gravity information. This requirement is per OSHA rules and regulations.

	28"	34"	38"
Vertical Center of Gravity (VCG) of Scale =	8.06	8.06	10.15
Horizontal Center of Gravity (HCG) of Scale =	2.09	2.09	2.83
Effective Thickness (ET) of Scale =	4.55	4.55	6.06
Weight of Scale	392	420	987
